Preface xxxv
Author xxxix

Part I Basic System Modeling and Programming Techniques

1. **Very-Large-Scale Integration Technology: History and Features** 3
   - 1.1 Introduction and Preview 3
   - 1.2 A Review of Microelectronics 4
   - 1.3 Complementary Metal Oxide Semiconductor Technology and Gate Configuration 7
   - 1.4 CMOS Fabrication and Layout 10
   - 1.5 VLSI Design Flow 12
   - 1.6 Combinational and Sequential Circuit Design 14
     - 1.6.1 Combinational Logic Circuits 14
     - 1.6.2 Sequential Logic Circuits 15
   - 1.7 Subsystem Design and Layout 15
   - 1.8 Types of Application-Specific Integrated Circuits and Their Design Flow 17
   - 1.9 VHDL Requirements and Features 19
   - Laboratory Exercises 21

2. **Digital Circuit Design with Very-High-Speed Integrated Circuit Hardware Description Language** 23
   - 2.1 Introduction and Preview 23
   - 2.2 Code Design Structures 24
   - 2.3 Data Types and Their Conversions 34
   - 2.4 Operators and Attributes 45
   - 2.5 Concurrent Code 50
   - 2.6 Sequential Code 55
   - 2.7 Flip-Flops and Their Conversions 65
     - 2.7.1 Flip-Flops 65
     - 2.7.2 Flip-Flop Conversions 70
   - 2.8 Data Shift Registers 77
   - 2.9 Multifrequency Generator 84
   - Laboratory Exercises 89

3. **Simple System Design Techniques** 91
   - 3.1 Introduction 91
   - 3.2 Half and Full Adder 91
   - 3.3 Half and Full Subtractor 96
   - 3.4 Signed Magnitude Comparator 98

3.5 Seven-Segment Display Interfacing 104
3.6 Counter Design and Interfacing 107
3.7 Digital Clock Design and Interfacing 115
3.8 Pulse Width Modulation Signal Generation 123
3.9 Special System Design Techniques 127
3.9.1 Packages and Libraries 127
3.9.2 Functions and Procedures 131
Laboratory Exercises 134

4. Arithmetic and Logical Programming 135
4.1 Introduction and Preview 135
4.2 Arithmetic Operations: Adders and Subtractors 136
4.2.1 Serial Adder 137
4.2.2 Parallel and Pipelined Adders 141
4.2.3 Subtractors 146
4.3 Arithmetic Operations: Multipliers 152
4.4 Arithmetic Operations: Dividers 163
4.5 Trigonometric Computations Using the COordinate Rotation DIgital Computer (CORDIC) Algorithm 170
4.6 Multiply-Accumulation Circuit 185
4.7 Arithmetic and Logical Unit 188
4.8 Read-Only Memory Design and Logic Implementations 194
4.9 Random Access Memory Design 200
Laboratory Exercises 203

Part II Custom Input/Output Peripheral Interfacing

5. Input/Output Bank Programming and Interfacing 207
5.1 Introduction and Preview 207
5.2 Optical Display Interfacing 208
5.2.1 Light-Emitting Diode Displays 208
5.2.2 Multisegment Display 210
5.3 Buzzer Control 215
5.4 Liquid Crystal Display Interfacing and Programming 217
5.4.1 Liquid Crystal Display 217
5.4.2 Graphical Liquid Crystal Display 223
5.5 General-Purpose Switch Interfacing 228
5.5.1 Dual Inline Package Switch 228
5.5.2 Bidirectional Port/Switch Design 231
5.5.3 Matrix Keypad Interfacing 233
5.6 Dual-Tone Multifrequency Decoder 235
5.7 Optical Sensor Interfacing 238
5.7.1 Infrared Sensors 238
5.7.2 Proximity Sensor 242
5.8 Special Sensor Interfacing 244
5.8.1 Passive Infrared Sensor 245
5.8.2 Metal Detector 248
5.8.3 Light-Dependent Resistor 251

5.9 Wind-Speed Sensor Interfacing 255
Laboratory Exercises 259

6. System Design with Finite and Algorithmic State Machine Approaches 261
6.1 Introduction and Preview 261
6.2 Finite State Machine Design: Moore and Mealy Models 261
6.2.1 Moore Finite State Machine Design 269
6.2.2 Mealy Finite State Machine Design 271
6.2.3 Finite State Machine Model Conversion 276
6.3 Code Classifier and Binary to Binary-Coded Decimal Converters 277
6.3.1 Input Code Classifier 278
6.3.2 Binary-to-Binary-Coded-Decimal Converter and Its Arithmetic 282
6.4 Binary Sequence Recognizer 286
6.5 Vending Machine Controller 293
6.6 Traffic Light Controller 301
6.7 Escalator, Dice Game and Model Train Controller Designs 309
6.7.1 Escalator Controller Design 309
6.7.2 Dice Game Controller Design 314
6.7.3 Electronic Model Train Controller Design 322
6.8 Algorithmic State Machine Charts 328
6.9 Algorithmic State Machine-Based Digital System Design 332
Laboratory Exercises 336

7. Interfacing Digital Logic to the Real World: Sensors, Analog to Digital, and Digital to Analog 339
7.1 Introduction and Preview 339
7.2 Basics of Signal Conditioning for Sensor Interfacing 339
7.2.1 Analog to Digital Conversion 340
7.2.2 Digital to Analog Conversion 341
7.3 Principles of Sensor Interfacing and Measurement Techniques 344
7.3.1 Optical Power Measurement 344
7.3.2 Temperature Measurement 346
7.3.3 Strain Measurement 349
7.3.4 Magnitude Comparator 350
7.3.5 ADC0804 Interfacing 351
7.4 Universal Asynchronous Receiver-Transmitter Design 356
7.4.1 Serial Communication: Data Reading/Writing Using MATLAB® 358
7.4.2 UART: Transmitter Design 365
7.4.3 Universal Asynchronous Receiver-Transmitter Receiver Design 371
7.5 Multichannel Data Logging 378
7.5.1 ADC0808/ADC0809 Interfacing 379
7.5.2 ADC0848 Interfacing 384
7.5.3 Analog to Digital Converter MAX1112 Interfacing and Serial Data Fetching 396
7.6 Bipolar Signal Conditioning and Data Logging 399
7.6.1 Bidirectional Analog to Digital Converter Interfacing 399
7.6.2 Opto-Electronic Position Detector Interfacing 403
7.7 Encoder/Decoder Interfacing for Remote Control Applications 411
7.7.1 Optical Tx/Rx Wireless Control 411

7.7.2 Radio Frequency Transmitter/Receiver Wireless Control 412
7.8 Pseudorandom Binary Sequence Generator and Time-Division Multiple Access 415
7.8.1 Serial Pseudorandom Binary Sequence Generator 415
7.8.2 Parallel Pseudorandom Binary Sequence Generator 418
7.8.3 Kasami Sequence Generator 422
7.8.4 Analog Time Division Multiplexing and M-Array Pulse Amplitude Modulation 424
7.9 Signal Generator Design and Interfacing 426
7.9.1 Low Voltage Digital to Analog Conversion Using DAC0808 426
7.9.2 High-Voltage Digital to Analog Conversion Using DAC7728 434
Laboratory Exercises 438

Part III Hardware Accelerated Designs

8. Real-Time Clock and Interface Protocol Programming 441
8.1 Introduction and Preview 441
8.2 Real-Time Clock (DS12887) Interface Programming 442
8.3 Inter-Integrated Circuit Interface Programming 449
8.4 Two-Wire Interface (SHT11 Sensor) Programming 456
8.5 Serial Peripheral Interface (SCP1000D) Programming 461
8.6 Global System for Mobile Communications Interface Programming 467
8.7 Global Positioning System Interface Programming 478
8.8 Personal System/2 Interface Programming 480
8.9 Video Graphics Array Interface Programming 484
Laboratory Exercises 492

9. Real-World Control Device Interfacing 493
9.1 Introduction and Preview 493
9.2 Relay, Solenoid Valve, Opto-Isolator, and Direct Current Motor Interfacing and Control 493
9.2.1 Relay Control 494
9.2.2 Solenoid Valve Control 497
9.2.3 Opto-Isolator Interfacing 501
9.2.4 Direct Current Motor Control 504
9.3 Servo and BLDC Motor Interfacing and Control 508
9.3.1 Servo Motor Control 508
9.3.2 Brushless Direct Current Motor Control 511
9.4 Stepper Motor Control 515
9.5 Liquid/Fuel Level Control 518
9.6 Voltage and Current Measurement 522
9.7 Power Electronic Device Interfacing and Control 526
9.8 Power Electronics Bidirectional Switch Interfacing and Control 532
9.8.1 Triac Control 532
9.8.2 Diac Controller 536
9.9 Real-Time Process Controller Design 538
Laboratory Exercises 544

10. Floating-Point Computations with Very-High-Speed Integrated Circuit Hardware Description Language and Xilinx System Generator (SysGen) Tools 547
10.1 Introduction and Preview 547
10.2 Representation of Fixed and Floating-Point Binary Numbers 549
10.2.1 Fixed-Point Number System 549
10.2.2 IEEE754 Single-Precision Floating-Point Number System 553
10.2.3 IEEE754 Double-Precision Floating-Point Number System 556
10.2.4 Customized Floating-Point Number System 558
10.3 Floating-Point Arithmetic 561
10.3.1 Floating-Point Addition 562
10.3.2 Floating-Point Subtraction 565
10.3.3 Floating-Point Multiplication 568
10.3.4 Floating-Point Division 573
10.4 Xilinx System Generator (SysGen) Tools 575
10.4.1 Use and Interfacing Methods of Some Blocksets 577
10.4.2 System Design and Implementation Using SysGen Tools 583
10.5 Fractional-Point Computation Using SysGen Tools 594
10.6 System Engine Model Using Xilinx Simulink Block Sets 603
10.7 MATLAB® Code Interfacing with SysGen Tools 610
10.8 Very-High-Speed Integrated Circuit Hardware Description Language Code Interfacing with SysGen Tools 614
10.9 Real-Time Verification and Reconfigurable Architecture Design 620
10.9.1 Design Flow for Hardware Co-Simulation 620
10.9.2 Reconfigurable Architecture Design 622
Laboratory Exercises 624

Part IV Miscellaneous Design and Applications

11. Digital Signal Processing with Field-Programmable Gate Array 627
11.1 Introduction and Preview 627
11.2 Discrete Fourier Transform 628
11.3 Digital Finite Impulse Response Filter Design 641
11.4 Digital Infinite Impulse Response Filter Design 644
11.5 Multirate Signal Processing 650
11.6 Modulo Adder and Residual Number Arithmetic Systems 663
11.6.1 Modulo 2^n and 2^n–1 Adder Design 663
11.6.2 Residue Number System 665
11.7 Distributed Arithmetic-Based Computations 672
11.8 Booth Multiplication Algorithm and Design 684
11.9 Adaptive Filter/Equalizer Design 690
Laboratory Exercises 698

12. Advanced SysGen-Based System Designs 701
12.1 Introduction and Preview 701
12.2 Fast Fourier Transform Computation Using SysGen Design 701
12.3 Finite Impulse Response Digital Filter Design 704
12.4 Infinite Impulse Response Digital Filter Design 710

12.5 Multiply Accumulation Finite Impulse Response Filter Using SysGen Design 712
12.6 Cascaded Integrator Comb Filter Design 715
12.7 COordinate Rotation DIgital Computer Design Using SysGen Tools 719
12.8 Image Processing Using Discrete Wavelet Transform 722
12.9 Very-High-Speed Integrated Circuit Hardware Description Language Design Debugging Techniques 727
12.9.1 ChipScope Pro Analyzer 728
12.9.2 Very-High-Speed Integrated Circuit Hardware Description Language Test-Bench Design 729
12.9.3 Data/Text File Reading/Writing 732
Laboratory Exercises 739

13. Contemporary Design and Applications 741
13.1 Introduction and Preview 741
13.2 Differential Pulse Code Modulation System Design 741
13.3 Data Encryption System 744
13.4 Soft Computing Algorithms 750
13.4.1 Artificial Neural Network 751
13.4.2 Fuzzy Logic Controller 753
13.5 Bit Error Rate Tester Design 755
13.6 Optical Up/Down Data Link 761
13.7 Channel Coding Techniques 766
13.7.1 Linear Block Code 767
13.7.2 Convolutional Code 769
13.8 Pick-and-Place Robot Controller 773
13.9 Audio Codec (AC97) Interfacing 775
Laboratory Exercises 781

Appendix A 783
